

ALLIANCE CONCRETE SINGAPORE

Your Project, Our Pride

COMPANY PROFILE

ABOUT US

Alliance Concrete Singapore Pte Ltd is a joint venture between Asia Cement (Singapore) Pte Ltd, and Supermix Concrete Pte Ltd (a subsidiary of Malayan Cement Berhad) was established in 1 January 2006.

This equal shareholding merger was initiated in the light of the escalating demand to meet the challenges of total commitment to quality, efficient service, health and safety as well as mindful of maintaining a clean and green environment.

Our niche is our technical capability to produce high strength concrete, viz Portland Blast Furnace Cement, Self-Compacting Concrete and Temperature Control Concrete.

Alliance Concrete Singapore, equipped with advanced technology and modern manufacturing facilities, is capable of a production capacity of approximately 1,200m³ per hour. With our best strategic network of site plants catered by a fleet of about 200 trucks, our experienced management and sales team are ever ready to serve you.

The company has attained the ISO 9001:2015, ISO 14001:2015 and ISO 45001:2018 certifications, as well as the BizSafe Star award in 2009. Alliance Concrete Singapore aims to consolidate and reinforce our leadership position and continue to differentiate ourselves from the rest through increasing our existing innovative products and solutions as well as service levels.

VISION
 Becoming the leader in the RMC industry in terms of safety and health, innovative and products solutions offering.

OUR PRIORITIES

For many years, Alliance Concrete Singapore has been committed to sustainable development, a strategic approach to long term value-creation which reflects the Company's foundational values: industrial expertise, performance culture, innovation, care for its employees' health & safety and the environment

OUR SHAREHOLDERS

Asia Cement (Singapore) Pte Ltd, a company incorporated in Singapore, is a wholly-owned subsidiary of Asia Cement Corporation (ACC) in Taiwan. ACC is one of the leading cement companies in Taiwan with regional presence in cement and concrete industries in Asia and is the parent of a group of companies whose core businesses are the manufacture and sale of cement, cement products, ready-mixed concrete and related building materials. ACC is listed on Taiwan Stock Exchange and is a member of Far Eastern Groups in Taiwan. Asia Cement (Singapore) owns 100% of Oriental Concrete Pte Ltd.

Supermix Concrete Pte Ltd is a wholly-owned subsidiary of Malayan Cement Berhad (MCB). MCB is listed on Bursa Malaysia Main Board and is the parent of a group of companies whose core business are the manufacture and sale of cement, ready-mixed concrete and related building materials. It is the pioneer and leader of the Malaysian cement industry in building materials, holds top-ranking positions in all four of its Divisions: Cement, Aggregates & Concrete, Roofing and Gypsum.

Alliance Concrete Singapore's commitments to excellence are centred based on the following 3 pillars: **Our Vision, Commitments and Performance Excellence Culture.**

Our Vision

Becoming the leader in the RMC industry in terms of safety and health, innovative and products solutions offering.

Our Commitments

Commitments to all our stakeholders by way of generating value to our clients, shareholders, employees and contributing to building a better world for our communities.

Our Performance Excellence Culture

Providing our employees every opportunity to contribute and develop their talents; delivering continuous performance improvement in optimizing its products and services.

OUR CONCRETE

Alliance Concrete Singapore produces a wide array of concrete to suit the needs of our various clients. Our resident concrete specialist along with a dedicated technical team is always ready to help you find exactly what you are looking for. Just let us know and our team will get right on it. Our niche is our technical capability to produce high strength concrete, viz Portland Blast Furnace Cement, Self-Compacting Concrete and Temperature Control Concrete.

OPC (Ordinary Portland Cement) is the cement used in the most basic and commonly manufactured concrete. It is the preferred mix design for most general construction.

PBFC (Portland Blast Furnace Cement) Concrete is specially designed concrete mix which has low hydration heat characteristics. This is particularly useful for mass concreting as it remains workable for a longer period of time.

HPC (High Performance Concrete) has been defined as concrete that possesses high workability, high strength and high durability. In HPC, certain characteristics are developed for the particular application and environment based on our clients' specified requirements.

SCC (Self-Compacting Concrete) is a specially optimized mix for different strength grades which can cater for wide range of applications. It can be placed and compacted under its own weight with no segregation or bleeding. SCC is a recent addition to the concrete development which is gaining popularity owing to the ease of its self-compacting/levelling/consolidating properties and can significantly improve the concretes performance.

HSC (High-Strength Concrete) has the same density as the average concrete but with a compressive strength class of higher than C50/60.

TCC (Temperature Control Concrete) mix design allows for its temperature to be kept within a specified range depending on our clients requirements.

Green Concrete is concrete which is designed to BCA mix specifications and guidelines with environmental conservation in mind.

Shotcrete (or Sprayed Concrete) is a mixture of cement, aggregate, and water projected at high velocity from a nozzle into place to produce a dense, homogeneous mass.

Sulphate Resisting Concrete (SRC) is concrete designed to improve its performance where the risk of sulphate attack may be present. It also provides improved durability for concrete in most aggressive environments, reducing the risk of deterioration of the structure and structural failure.

Slump Flow Concrete (SFC) is designed using unique concrete mix optimization techniques to produce high workability concrete for different strength grades which can cater for wide range of applications. It can be placed and compacted with little vibration effort, while being cohesive enough to be handled without any segregation or bleeding and can significantly improve the concrete performance.

CUSTOMER SERVICE

Here at Alliance Concrete Singapore, we value our customers. We strive to manufacture and supply concrete of the highest standards and nothing less will suffice.

However, our services go beyond just that. It is for this reason that should you have any queries regarding our products even after its supply, our highly experienced and capable team will gladly do all that they can to shed light on the matter.

QUALITY

There is no compromise when it comes to quality. And in the promise of this quality, Alliance Concrete Singapore has a stringent 3-tier quality inspection policy that ensures the standard of quality from the moment our materials arrive, up to the time you receive our product.

- ✦ Receiving Inspection
- ✦ In-Process Inspection & Testing
- ✦ Final Inspection & Testing

On top of this, Alliance Concrete Singapore also adopts and abides by the SS EN 206 guidelines.

SS EN 206

Applicable to concrete for structures and precast components for buildings and civil engineering structures. It covers ready-mixed concrete, concrete which is mixed on site and concrete produced in a plant for precast concrete products, specifies requirements for constituent materials of concrete, properties of fresh and hardened concrete and their verification, limitations for concrete composition, delivery of fresh concrete, production control procedures, conformity criteria and evaluation of conformity.

GPS SYSTEM

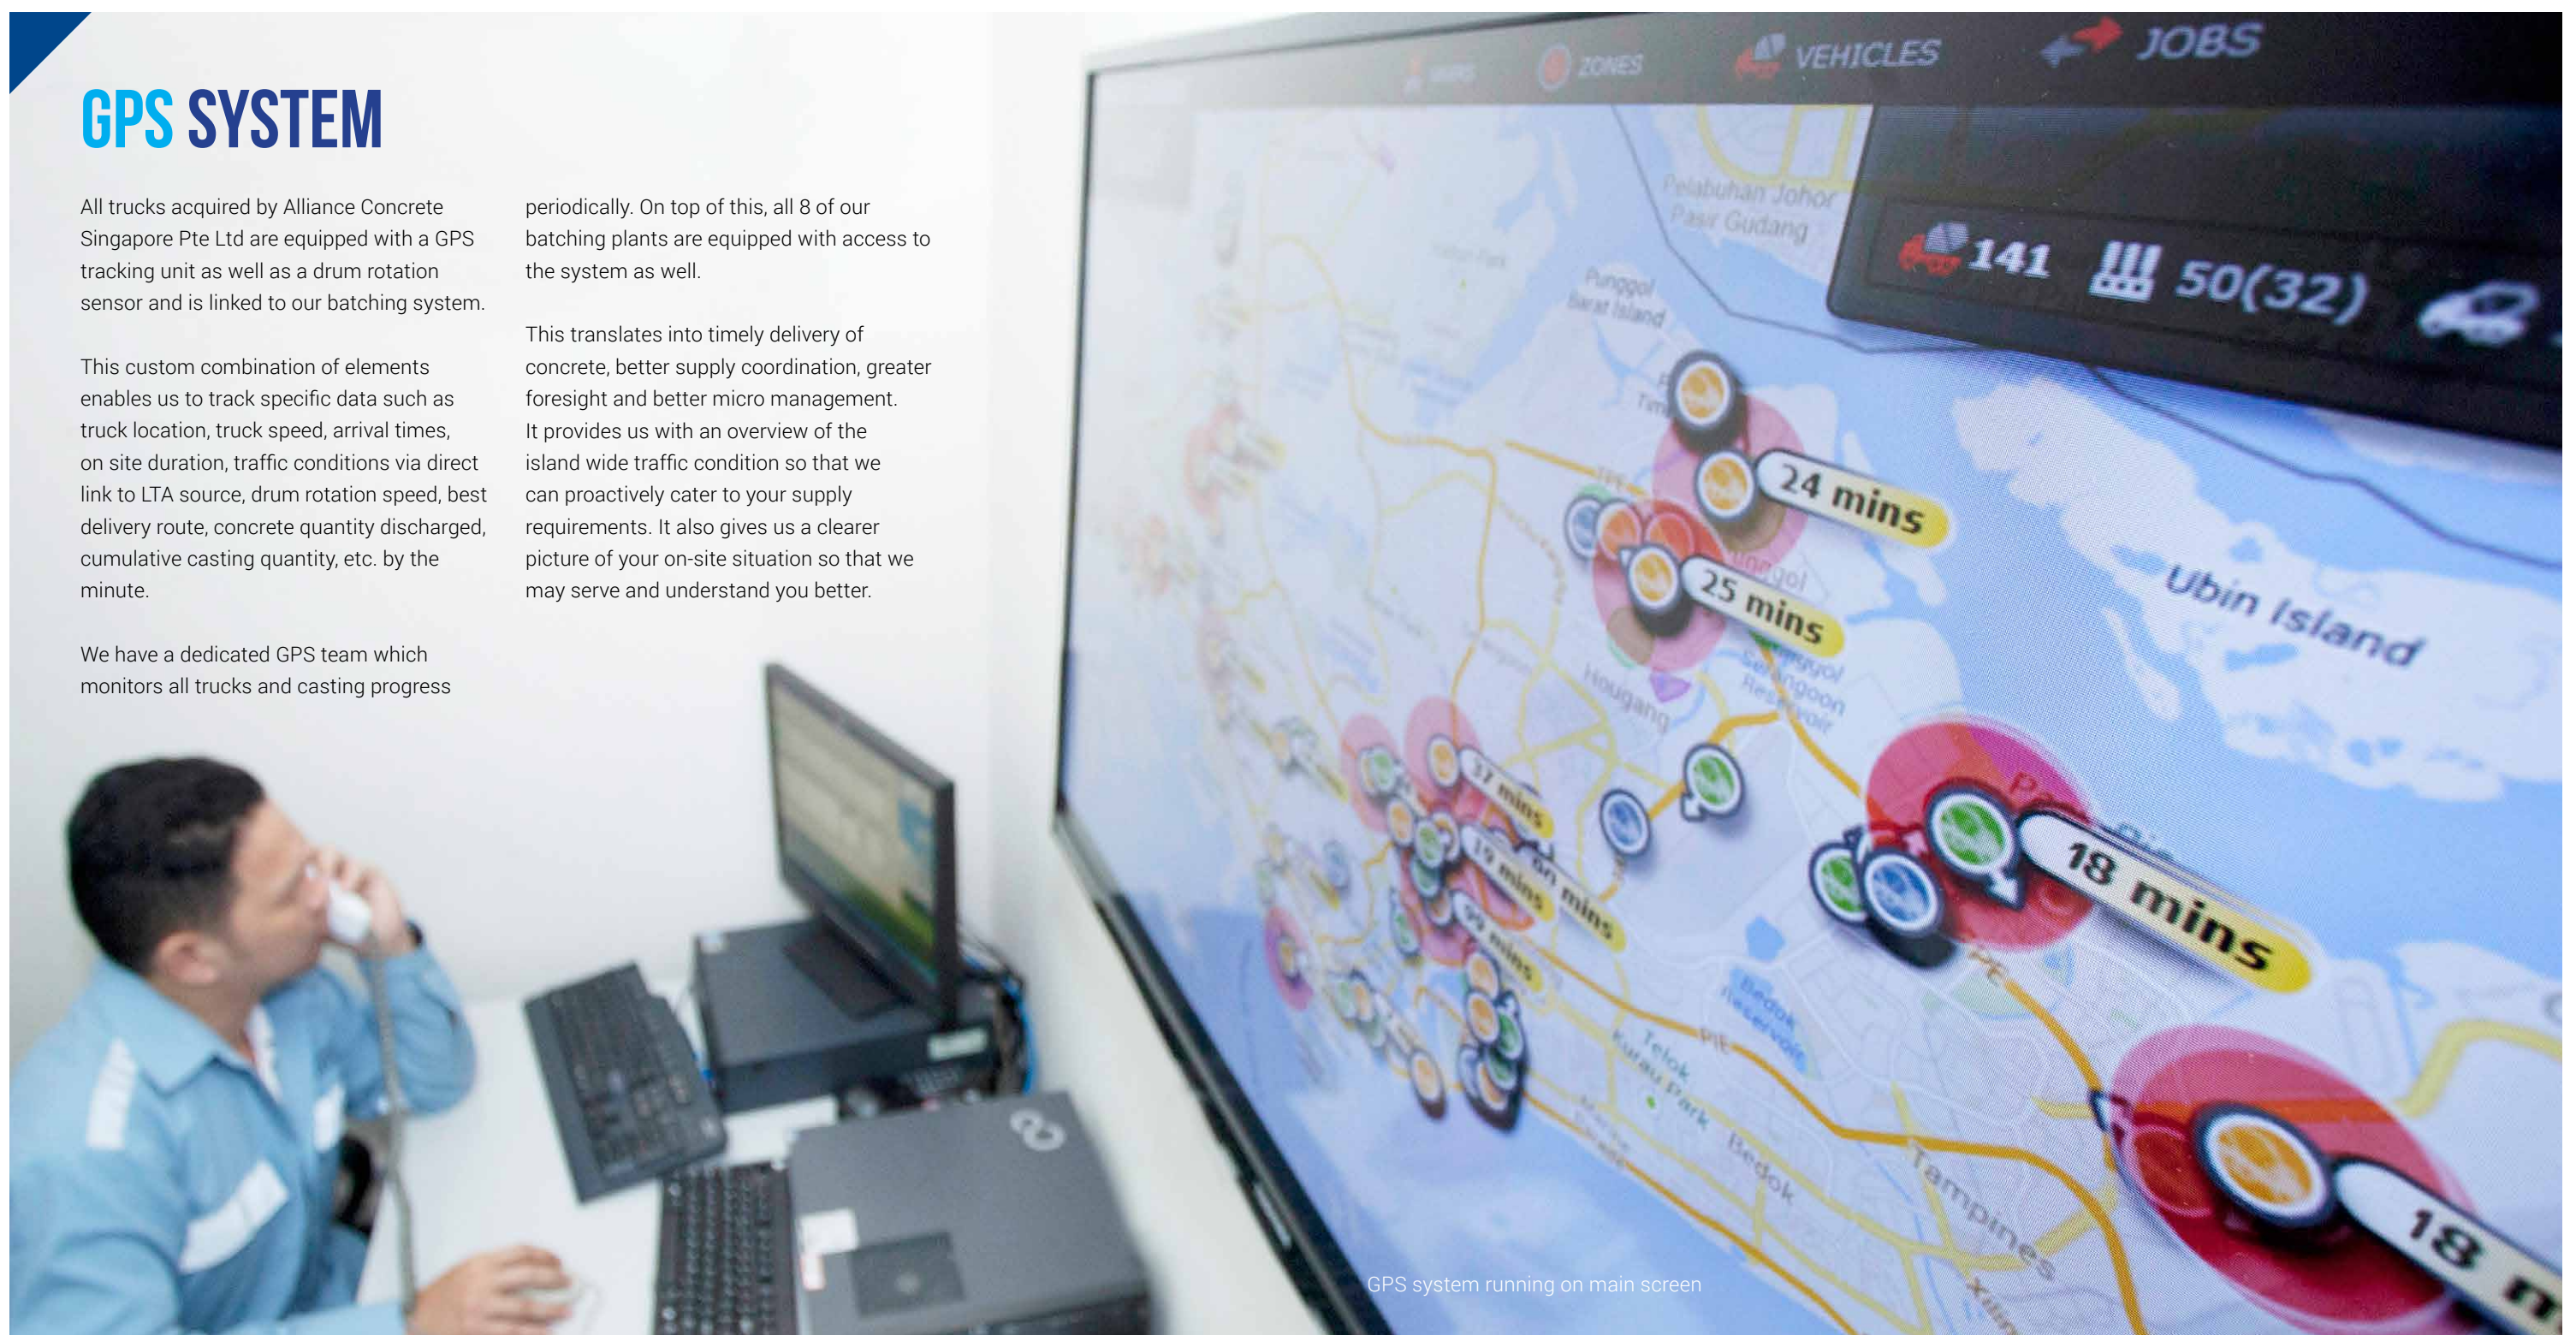

All trucks acquired by Alliance Concrete Singapore Pte Ltd are equipped with a GPS tracking unit as well as a drum rotation sensor and is linked to our batching system.

This custom combination of elements enables us to track specific data such as truck location, truck speed, arrival times, on site duration, traffic conditions via direct link to LTA source, drum rotation speed, best delivery route, concrete quantity discharged, cumulative casting quantity, etc. by the minute.

We have a dedicated GPS team which monitors all trucks and casting progress

periodically. On top of this, all 8 of our batching plants are equipped with access to the system as well.

This translates into timely delivery of concrete, better supply coordination, greater foresight and better micro management. It provides us with an overview of the island wide traffic condition so that we can proactively cater to your supply requirements. It also gives us a clearer picture of your on-site situation so that we may serve and understand you better.

ENVIRONMENTAL, HEALTH & SAFETY

Alliance Concrete Singapore is aware of our responsibility as a manufacturer of ready mixed concrete and is fully committed to promote environmental, occupational health and safety activities; minimize risk to employees and others; improve business performance and to establish a responsible image within the marketplace and to achieve continual improvement in our safety performance.

We adopt a total Workplace Safety and Health approach which involves all staff to collaborate in a continual improvement process to protect and promote safety, health and wellbeing of all employees. We ensure all staff of Alliance Concrete Singapore work in a safe and healthy environment as each personnel have a right to expect safe and healthy work conditions in their workplace. We place quality and

Environmental, Health and Safety as a prime responsibility of our staff.

We regard Health & Safety as core business values being integrated in the overall business performance. We are committed to achieve a high level of Environmental, Health and Safety performance with compliance to legislation requirements and to achieve the highest possible efficiency within

office and operational site consistent with maintaining effective EH&S standard.

Alliance Concrete Singapore has in place an effective Health & Safety management system, continuous safety training, stringent monitoring and audit program that ensure a healthy and safe place to work in.
